

Software Engineer

About Byteflies

We are the digital health company behind Sensor Dot, a powerful wearable platform for 24/7 acquisition of physiologic and behavioral data. We have developed remote monitoring applications for epilepsy, COVID-19, and atrial fibrillation, and have a pipeline of additional clinical indications. Currently, we are looking for a **Software Engineer** to help bring the EpiCare@Home product to life.

Byteflies is structured in autonomous cross-functional teams that have all skills to complete their own part of the Byteflies mission. We have a product team that designs and supports our technology and devices, a manufacturing team that builds our kits, two implementation teams that run projects for our customers using our products, and an operations team that supports all of our employees. All of these teams have great autonomy in reaching their goals.

How you fit in our team

You are an experienced software developer with strong front end capabilities driven to help transform the brilliant concepts into functional features for the Connecting the Dots team. The Connecting the Dots team is the epilepsy application team of Byteflies. They have just launched the EpiCare@Home product which seeks to provide an objective seizure counter to epilepsy patients and their neurologists. You play a key role in how this product looks and feels in the hands of these patients and neurologists. You are an effective communicator to both developers and non-developers in and out of the team. You are an excellent team player who thrives in multidisciplinary teams and can translate their needs into clear and efficient code.

Your role

On a weekly basis, our Software Engineer will:

- Iterate on the EpiCare@Home web dashboard for speed and scalability
- Iterate on the EpiCare@Home mobile app for speed and scalability
- Work with UX/UI designers and back-end developers to implement visually appealing and functionally excellent features
- Assist software developers in back-end development when needed
- Work in an agile team, with daily scrums and weekly sprint plannings

Your skills and experience

Our Front End Engineer should be someone who:

- Is fluent and has industry experience in React and React Native
- Has experience with AWS
- Has at least a basic understanding of Python and NodeJS
- Is able to communicate development concepts to non-developers
- Is a team player and is willing to take on a variety of tasks
- Describes themselves as a high-achiever who thrives in a fast-paced and multidisciplinary environment, and is always willing to go the extra mile to learn from and train their colleagues

We offer

- A position in our Antwerp (Belgium) team
- Competitive salary and benefits package
- Rapid career development paths
- The chance to have a direct impact on people's health care
- Awesome co-workers
- Great team events

Our values

We at Byteflies are Impactful Warriors and Positive Team Players. We want to change the world for the better. We like to do that by finding the smartest and fastest route to get to products and services of the right quality.
