ISO9001 : Policy Statement

MinDCet is a fabless mixed-signal Power IC design company, including supply-chain support for characterization, qualification, production, packaging and testing. MinDCet provides 4 types of products and services to fulfilling the requirements of their customers:

- ASIC Design
- Production test development
- Standard ICs
- Measurement Systems

MinDCet handles each project with full customer focus, respecting the agreed requirements, lead times and milestones, where feedback of the customer is key.

MinDCet engages their highly-skilled and educated team to complete their customer projects. Potential employees are screened on relevant skills and expertise. Each employee is trained on-the-job, where their evolution and training needs are evaluated on a continuous base. This strategy ensures that MinDCet always operates with the highest level of expertise in the field possible.

MinDCet engages external suppliers and subcontractors to provide the necessary tools, equipment and resources to support their project completion. Lead times and quality of these products and services are monitored on a continuous base.

Quality objectives are an integral part of the business. Every employee has the responsibility to assist in realizing these goals, guided by the required supporting procedures, instructions and forms. The management is committed to provide the resources for the realization of the quality objectives.

MinDCet applies its quality system according to the ISO 9001 standards, to enable a continuous monitoring and improvement of quality and customer satisfaction, with the engagement to meet all legal requirements.

The strategy of MinDCet consists of growing the company further in their design services business model, but also start to develop the company as a standard IC product company in the years to come.
