

PRESS RELEASE

Noesis Solutions Joins PTC[®] PartnerAdvantage[™] Program

Noesis Solutions' Optimus connects PTC Creo[®] Parametric to simulation process integration and parametric design optimization

Leuven, Belgium, July 3 - 2012 – Noesis Solutions, the developer of Optimus, announced today that it has joined the PTC PartnerAdvantage Program at the Silver Tier. Inclusion in the partner program, which provides access to a comprehensive suite of capabilities, followed an extensive review of Noesis Solutions' Optimus simulation process integration and parametric design optimization capabilities.

Acceptance in the PartnerAdvantage Program arose from Optimus' capability to automate the simulation-based design process, and efficiently direct simulation campaigns to identify the best designs. This approach strengthens manufacturers' competitive edge by delivering the best designs in the shortest time possible, while saving tremendously on resources. By interfacing directly with Creo Parametric[™], Optimus can automatically extract and modify model parameters from any product design made with Creo Parametric. Optimus can then easily define and execute simulation processes that automatically drive any commercial and in-house simulation packages of choice that further build upon the Creo Parametric model. Optimus offers a productive simulation environment to resolve complex multi-disciplinary engineering challenges and create exceptional product designs.

"We are pleased that PTC views Optimus as a tool that is important to its customers, and we are delighted to have been included in the PartnerAdvantage Program," stated Hans Wynendaele, Noesis Solutions CEO. Andy Barlow, PTC's Senior Director of Business Development, stated, "With the addition of Noesis Solutions to the PTC PartnerAdvantage Program, Creo Parametric users that use Optimus have a unique and powerful solution for simulation process integration and parametric design optimization." He continued, "The partner program is comprised of software providers selected for their expertise. Through our review process, Noesis Solutions demonstrated its expertise in converting iterative engineering practices into an automated and targeted process that delivers benchmark product designs. The company is a great addition to the program."

About Noesis Solutions

Noesis Solutions is an engineering innovation partner to manufacturers in automotive, aerospace, and other advanced engineering industries. Specialized in simulation process integration and numerical optimization, the company's flagship product Optimus focuses on resolving customers' toughest multi-disciplinary engineering challenges. Optimus identifies the best candidates by managing a parametric simulation campaign that orchestrates the software tools customers already use. After evaluating the proposed design alternatives, customers pick the most optimal and robust design option to verify the design in detail and take it into production. Noesis Solutions operates through a network of subsidiaries and representatives in key locations around the world. For more information, please visit www.noessolutions.com.
