

PRESS RELEASE

Italian subsidiary office supports Noesis Solutions' expansion

Leuven (Belgium), February 8, 2016 – To respond to increasing worldwide demand for its range of solutions that enable an **Objectives Driven Engineering** strategy, Noesis Solutions has opened a subsidiary office in Novara, Italy. The keywords for Noesis Solutions Italia Srl are customer proximity, project collaboration and technology research.

Customer proximity in a manufacturing-intense region

As the team working in the Italian Noesis Solutions branch office significantly grew over the past years, a new subsidiary office has been set up in Novara. The activities coordinated from there facilitate support of Noesis Solutions customers in the region known as the industrial triangle formed by Milan, Turin and Genoa. In addition, proximity to customers and academic research institutions triggers challenging project work and extensive collaboration with specialized partners in Northern Italy – famous for aerospace, automotive and general manufacturing.

Technology research and project collaboration

The engineering specialists working at Noesis Solutions Italia have a long and successful history in research related collaboration with renowned manufacturing companies and knowledge organizations.

Roberto d'Ippolito, Noesis Solutions' Research and Innovation Manager and based in the Novara office, comments: "Together with our colleagues from Noesis Solutions' headquarters, we take part in key research projects sponsored by various official organizations. Therefore, the team members in Novara exhibit strong engineering know-how, simulation and optimization expertise, as well as project management capabilities."

About Noesis Solutions

Noesis Solutions is an engineering innovation partner to manufacturers in engineering-intense industries. Specialized in solutions that enable **Objectives Driven Draft-to-Craft Engineering** processes, its software products and services help customers adopt a targeted development strategy that resolves their toughest multi-disciplinary engineering challenges.

This **Engineer by Objectives** strategy entails an automated approach that streamlines engineering processes to efficiently manage the growing complexity of today's engineering challenges. In addition, interactive design space visualization allows engineering teams to make informed decisions faster – empowering them to form & transform ideas into products that outsmart competition.

Noesis Solutions operates through a network of subsidiaries and representatives in key locations around the world. For more information, please visit www.noesisolutions.com.
