

Noesis acquired by Cybernet Systems

Press release, July 2010

Leuven, Belgium. 1st July 2010 | Today the Tokyo-based Cybernet Systems, distributor of computer-aided engineering (CAE) software, has acquired the Belgian company Noesis Solutions, market leader in CAE process integration and design optimization software. As a former LMS International subsidiary Noesis from now on operates as a wholly owned subsidiary of Cybernet Systems.

Trust solidified

The acquisition is a logical step after years of successful cooperation. Cybernet Systems had been operating with a dedicated team of people for a long time to handle Noesis distribution in Asia to an ever-widening customer base.

Cybernet Systems will accelerate the expansion of its CAE multiproduct solution service by fully integrating OPTIMUS, a multi-disciplinary program by Noesis that leverages CAD/CAE systems. Noesis is proud to see the trust in their innovative vision solidified this way. It will ensure their growth and competitiveness on the global market and will enable them to develop and expand their solutions from a secure position.

Empowering² your business

The acquisition will have no impact on Noesis' day-to-day customer service and cooperation with partners. This step confirms OPTIMUS by Noesis is a strong, future proof solution that will continue to *empower your experience* in even better ways.
